New View Surgical Announces First Commercial Case of the VisionPort™ System, Performed by David Earle, M.D., F.A.C.S.

BOSTON, MA, (December 6, 2022) [New View Surgical](#), an emerging medical device company developing proprietary imaging and access technologies for minimally invasive surgery (MIS), announced today the first-in-human procedure utilizing the VisionPort™ System. The VisionPort System was used to complete a laparoscopic cholecystectomy for removal of a gall bladder and was performed at Lowell General Hospital in Lowell, Massachusetts by Dr. David Earle, founder of the New England Hernia Center and associate professor at Tufts University School of Medicine in Boston.

“The VisionPort system is a revolutionary product for laparoscopy that addresses many unmet needs in

the operating room,” shared Dr. Earle. “I believe that the VisionPort will not only change how surgeons think about performing minimally invasive surgery but will enhance laparoscopy in both academic and austere environments. This is the first major innovation in visualization since laparoscopy first gained popularity in the early 1990s, and I’m very excited to be a part of it”.

Redefining and Simplifying Minimally Invasive Surgery

Advancing the growth of minimally invasive surgery through novel, single-use design approach visualization that improve clinical care, streamline process, and reduce costs for healthcare systems worldwide

About Us

At New View Surgical, we aim to advance the growth of minimally invasive surgery through novel, single-use design approach visualization that improve clinical care, streamline process, and reduce costs for healthcare systems worldwide

The VisionPort System

Our innovative VisionPort System is FDA approved as of June 2021. We're excited to bring this VisionPort surgical visualization and access to the US market and look forward to partnering with leading surgeons, nurses and hospitals to improve surgical care and operations, and reduce overall costs.
